# Trax✓Print

Geo-Fencing

Trax✓Print™

Geo-Fencing

Redacted (blanked out) information on a document can only be displayed via our Trax Print app when in a specified GPS location. This is integral for the privacy of sensitive documentation and internal document transfers where you wish to prevent it from being viewed by third parties.

Perfect for:
- Banks
- Military & Public Service
- ID Protection
- Government Documents
- Policy Documents
- Contracts

Process

- When a Trax Code is created we build in the GPS location of the person who will scan.
- We place the unique Trax code on the document.
- The document is sent to intended persons
- If the document is scanned in the location programmed into the Trax Code, the document will be viewable.
- If the document has been intercepted or forwarded, the document will not be viewable.
- Multiple locations can be added by the document owner online or by personally scanning the document with their Trax Print scanner

With multi-layer encryption and triple level validation the closed loop Trax Print system has military level security.
